

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

*the Preparation of the Pareira Brava, as Monsieur
Duyvenvoorde uses it.*

TAKE Eleven Grains of this Root, and put it into a Pewter Tea-pot fill'd with boyling Water, and so let it infuse all Night over warm Ashes, or a very small fire; and in the Morning boyl it again, but very gently, till you use it. You must drink it just as you do Tea, and the Liquor which comes from this Infusion must not exceed the Quantity of 5 small Dishes of Tea.

*IV. A Letter of Mr. Francis Nevile to the Right
Reverend St. George Lord Bishop of Clogher,
R. S. S. Giving an Account of some large Teeth
lately dugg up in the North of Ireland, and by his
Lordship communicated to the Royal-Society.*

Belturbet, July the 29th. 1715.

My LORD,

THE Curiosity I here send your Lordship, is so far beyond any thing that I have had the honour to communicate to your Lordship, or that I have ever met with, that I presume your Lordship will think it fit to communicate to the Royal-Society; I have sent the Draught, after the best manner I could draw it, enclosed; it is the Draught of two Teeth lately found within Eight Miles of this Town at a place call'd *Maghery*, in part of the Bishop of *Killmore's* Lands, sinking the Foundation for a Mill near the Side of a small Brook that parts the Countys of *Cavan* and *Monaghan*.

The

There are in all four Teeth, two of a larger and two of a smaller sort, the largest is the farthest Tooth in the under Jaw, the other is like it and belongs to the opposite Side; the lesser Tooth I take to be the third or fourth Tooth from it, and has its Fellow: these are all that were found, and one of them in a Piece of the Jawbone, which fell to dirt as soon as taken out of the Earth; there was part of the Scull found also of a very large Size and Thickness, but as soon as exposed to the Air that mouldered away as the Jaw had done.

The Account I had led me last Week to the Place, where I was resolved to make the nicest Search I could; but the Water-wall of the Mill being built, and the Ground all incumbered with the Earth that was thrown up, I could have little Opportunity of doing any thing, but to enquire of the Workmen the manner of finding the Teeth, and where and how they lay. There were some few Peices of Bones found, but none entire, yet by those Bits that were found, one might guess that they were Parts of those that were of a larger Size.

The Place where this Monster lay was thus prepared, which makes me believe it had been buried, or that it had lain there since the Deluge. It was about four Foot under Ground, with a little Rising above the Superficies of the Earth, which was a Plain under the Foot of a Hill, and about 30 Yards from the Brook or thereabout. The Bed whereon it lay had been laid with fern, with that sort of Rushes here call'd *Sprits*, and with Bushes intermixed. Under this was a stiff blew Clay on which the Teeth and Bones were found: Above this was first a Mixture of yellow Clay and Sand much of the same Colour; under that a fine white sandy Clay which was next to the Bedd: the Bedd was for the most part a Foot thick, and in some Places thicker, with a Moisture clear through it; it lay sad and close and cut much like Turfe, and
would

would divide into Flakes, thicker or thinner as you would ; and in every Layer the Seed of the Rushes was as fresh as if new pull'd, so that it was in the Height of Seed-time that those Bones were lay'd there. The Branches of the Fern, in every Lay as we open'd them, were very distinguishable, as were the Seeds of the Rushes and the Tops of Boughs. The whole Matter smelt very sower as it was dug, and tracing it I found it 34 Foot long, and about 20 or 22 Foot broad.

It will be well worth consideration what sort of a Creature this might be, whether Human or Animal ; if Human, there was some reason for the Interrment, and for that Preparation of the Bed it was laid on ; if Animal, it was not worth the Trouble : if Human, it must be larger than any Giant we read of ; if Animal, it could be no other than an Elephant, and we do not find that those Creatures were ever the Product of this Climate. And considering how long this must have lain here, I do not believe the Inhabitants then had any Curiosity or Conveniency to bring such into this Kingdom ; for I suppose the best of their Ships could not carry one. Then if an Elephant, or some other Beast which must have proportion to the Teeth, it must have lain there ever since the Flood ; and if so, then the Bed on which it lay must be of its own making : whence it will follow that the Flood coming on him while he lay in his Den, he was there drown'd, and covered with Slime or Mud, which since is turn'd into the Substance of the Earth before-mention'd. I forgot to mention that there was a great many Nutshells found about the Bed, perhaps those might have been on the Bushes which compos'd part of the Bed.

The two large Teeth are of equal Weight, two Pound three Quarters each ; the two little Teeth are six Ounces
M m m each ;

each; but there are some of them wasted, and some of Holders that go into the Jaw broken off.

I am,

My LORD,

Your Lordship's most dutiful
and obedient Servant.

FRANCIS NEVILE.

V. *Remarks upon the aforesaid Letter and Teeth, by Thomas Molyneux, M. D. and R.S.S. Physician to the State in Ireland: Address'd to his Grace the Lord Archbishop of Dublin.*

MY LORD,

WHEN your *Grace* was pleas'd to communicate to me a Letter you received some while since, containing an Account of an extraordinary Natural Curiosity, lately discover'd in the *North of Ireland*, in the County of *Cavan*, you desired I would give you my Thoughts concerning it, and the Purport of the Letter: but truly when first your *Grace* gave me the Opportunity of perusing this Account, and I consider'd the imperfect Sketches of the *Teeth* annex'd to it, I was not a little concern'd, that upon the making so surprizing a Discovery, I could not command a Sight of the Originals themselves, from whence the Draughts were taken; or that so great a Curiosity should be express'd by the Hand of an Artist that shew'd so little Skill: however, by the best Judgment
